DENTAL PHARMACOLOGY
FINAL EXAM

April 18, 2003

You have TWO (2) hours and 30 minutes to complete this examination. The examination contains 100 questions, each worth 1 point.

Answer all questions on the computer sheet provided; use a soft lead pencil. Be sure that you have correctly identified your answer sheet by PRINTING your name and social security number and correctly filling in the grid spaces. Please turn in your exam booklet and answer sheet at the end of the exam. The exam booklet will be returned to you.

This examination is being administered under the Honor Code of Temple University Dental School.

Ask about Tablespoon #38

Questions 1 - 89: Select the single, most appropriate answer.

All of the following are pharmacological effects of aspirin EXCEPT: A. Reduction of fever 7 B. Reduction of prostaglandin synthesis in inflamed tissues T Reduction of bleeding tendency False D. Tinnitus and vertigo 7E. Gastrointestinal ulceration in chronic use 7 Selective cyclooxygenase (COX-2) inhibitors A) May have a reduced risk of gastrointestinal bleeding compared to other nonsteroidal antiinflammatory drugs B. Have antiinflammatory effects similar to acetaminophen C. Like aspirin, are irreversible inhibitors of the COX-2 enzyme D. Interfere with the homeostatic, cytoprotective function of prostaglandins E. Include ibuprofen and naproxen Pregnancy is the predominant condition requiring an increase in the daily intake of which vitamin, to prevent neural tube defects? A. Vitamin B-1 (Thiamine) B. Vitamin B-3 (Niacin) Vitamin A (Retinol) D.J Vitamin M (Folic Acid) E. Vitamin C (Ascorbic Acid) All of the following statements about antibiotics are true **EXCEPT**: Tetracycline is useful in treating bone infections false Clindamycin may give rise to pseudomembranous colitis C. Vancomycin can be used to treat pseudomembranous colitis D. Streptomycin can give rise to auditory problems E. Chloramphenicol can cause aplastic anemia 5. All of the following statements about penicillins are true **EXCEPT**: Autolytic enzymes are involved in the antibiotic effect of penicillins 3. Benzathine penicillin G is a repository form of penicillin 1 (C) Penicillins are useful in treatment of Legionnaire's disease - Chiu Penicillins are excreted unchanged in the urine Penicillins can cause rash and other allergic reactions

| Vary w | Name of the Control o |
|-------------|--|
| 6. | A second-year dental student is playing basketball when he steps on a nail, which |
| TEMP (2) | penetrates his foot. He soon develops a painful gram-negative Pseudomonas |
| | |
| The . | his physician to prescribe an antibiotic publish in the result weeks away he asks |
| <u> </u> | to the library to an all which is orally available, so that he can get |
| | to the library to study. Which of the following drugs did he ask for? |
| 30.00 | A. Cefaclor Cally 7 |
| 1.30 | A. Cefaclor B. Clindamycin C. Gentamicin D. Ciprofloxacin E. Doxycycline Which of the following drugs did he ask for? A. Cefaclor C. Gentamicin A Mino Ji A Mino Ji E. Doxycycline |
| | C. Gentamicin -7 All 1.1. Strandon Marine Anima di |
| | D. Ciprofloxacin - Out Olava |
| 30 | E. Doxycycline |
| | 1 Carlo |
| 7. | |
| | All of the following antibiotics act through inhibition of bacterial protein synthesis EXCEPT: |
| 77 | |
| 345 | A. Streptomycin - inhibit protein synthesis |
| | B. Tetracycline - |
| 1.5 | (C) Polement |
| * | D. Clindamycin inhibits protein synthesis. |
| tul taken s | E Erythromycin |
| 14. | |
| 8. | Which of the following antibiotic combinations is indicated for the treatment of Pneumocystis carinii pneumonia? |
| | Pneumocystis carinii pneumonia? |
| | production: |
| | A. Rifampin + Isoniazid - \mathcal{TB} |
| | B. Rifampin + Erythromycin |
| | C. Penicillin + Aminoglycoside |
| | D Penicillin + Tetracycline |
| | (E.) Trimethoprim + Sulfamethovazolo T. P. Pro Line 1 |
| | E. Trimethoprim + Sulfamethoxazole - Tx of Pneumocystis Carinii pneumonia |
| 9. | Which of the following statements best describes the mechanism of action |
| | of warfarin? |
| | of warfarin? inhibits coag. factors |
| | (A.) It inhibits the final step in the synthesis of energies |
| | B. It inhibits platelet aggregation aspirin |
| - | C. Il Innibits thrombin |
| | D. It hinds the calcium ion to factor would be |
| | E. It increases the activity of antithrombin-III |
| | TO THE WASHINGTON TO THE PARTY OF THE PARTY |

| *************************************** | 10. The following statements are true of nitrous oxide EXCEPT: | 10000 |
|---|---|--------------------|
| | A. Can cause hypoxia due to wash-out of oxygen T B. Can be abused T Has analgesic properties T D. Is a good agent for relaxation of skeletal muscle Fake. Doesn't do St. E. Can be used in combination with local anesthetics to reduce the patient's anxiety T | lele lal me |
| 581 | 11. Which statement best describes halothane? | |
| | A. Is totally excreted unchanged and thus is not hepatotoxic False. Hepato B. Is a relatively weak agent, not useful for stage three anesthesia False C. Is a depressant of respiration True D. Is administered intravenously False Inhalation E. Its pharmacokinetics are best explained by redistribution to adipose tissue | False |
| | 12. Which of the following antiarrhythmic drugs best fits the following description a sodium channel blocker that has moderate antimuscarinic activity, moderate blunts conduction and moderately prolongs the OT interval? | n: <u>l</u> y |
| Vat Channel Blocker | A. Esmolol B. Lidocaine C. Verapamil D. Flecainide E. Quinidine - prolongs QT. intending moderate antimuscaring act | hvity. |
| | 13. All of the following effects are associated with acute or chronic alcohol ingest EXCEPT: | ion . |
| | ✓ A. Lesions of the myocardium F ✓ B. Decrease in high density lipoproteins F ✓ C. Cutaneous vasodilation T D. Increased fat production in the liver E. Inhibition of testosterone | *** |
| | 14. A short-acting benzodiazepine that is most useful in the treatment of insomnia: | i e i e |
| | A Triazolam B. Chlordiazepoxide C. Oxazepam D. Nitrazepam E. Diazepam | |
| | | |

| | B. Sulfamethoxazole + Trimethoprim | |
| | (C.) Ampicillin + Tetracycline | F 145. R. C. C. |
| | D. Ampicillin + Clavulanic acid | A STATE OF THE STA |
| | E. Isoniazid + Rifampin | September 1 |
| 1 | All of the following statements about envilormy on are true EXCEPT: | nst Legionnain |
| 63/ | All of the following statements about erythromycin are true EXCEPT: | Disea |
| | | |
| | A. Is a macrolide antibiotic True True Transant -Not aminogy | ocide |
| <i>'</i> | B) Is bacteriostatic & del | IN MARKIT THE |
| | | 05 |
| | C. Can be used to treat Mycoplasma infections bacteriocia | al |
| | is an alternative for penicillin-sensitive patients 7 | |
| | B Is excreted unchanged in the urine | er to take |
| | | |
| 64. | Which of the following statements best describes the mechanism by which | A September 1 |
| A1 141 | colestipol lowers LDL levels? | · 5886-2586 |
| | corpsipor lowers EDE levels: | |
| | A Dinda Lila saida is al | dochy romine |
| | b Free Jenning Leader Princip | A-Chile Com |
| | B. Inhibits lipolysis in adipose tissue N Million | |
| \subset | C.) Stimulates lipoprotein lipase activity | |
| | D. Inhibits HMG CoA reductase - Statin | |
| | E. Inhibits lipoprotein lipase activity | |
| | 2. Himoto hepotocom heads delivity N. | |

| 65. A | ll of the following are attributes of digoxin EXCEPT: | |
|-----------------|--|--|
| C D | Acts directly on the kidney to produce a prominent diuresis Increases intracellular calcium Prolongs the P-R interval of the electrocardiogram Increases cardiac contractility Increases cardiac excitability | signed Unu Ton Squ Hanard bon |
| 66. B | otulinum toxin acts by | |
| . С. Д. | Decreasing calcium release from the sarcoplasmic reticulum F Preventing glycine release F Binding irreversibly to the nicotinic receptor F Releasing excessive amounts of acetylcholine F Preventing acetylcholine release | |
| 67. The | ne combination of levodopa plus carbidopa (Sinemet) is used in preference t vodopa alone in treating parkinsonism because | O Spaller |
| B. C. | Carbidopa elevates the amount of plasma dopamine The need to use supplemental acetylcholine agonists is eliminated The need to use supplemental dopamine antagonists is eliminated Carbidopa decreases the breakdown of levodopa in the peripheral circulatical Carbidopa releases GABA | on : |
| 68. Al | l of the following conditions have been attributed to excessive alcohol nsumption EXCEPT: | September 1975 |
| . В. С Д, | Cirrhosis of the liver Korsakoff's psychosis Fetal alcohol syndrome Congestive heart failure Coronary artery disease The property of the liver The pro | |
| .69. Ad | lverse reactions of atropine include all of the following EXCEPT: | September 1 |
| A. | Mydriasis and blurred vision Constipation Urinary retention Bronchoconstriction Tachycardia | ************************************** |

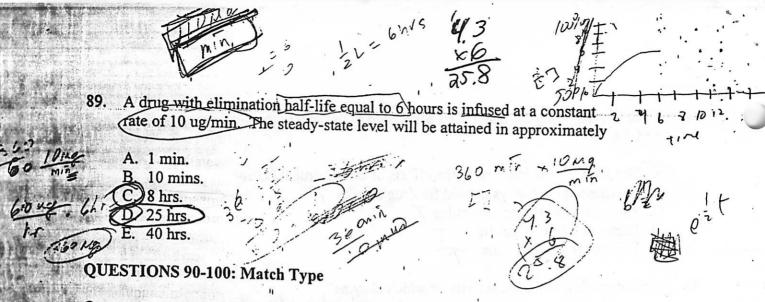

| | 70. Which of the following drugs reduces ergosterol synthesis in fungal cell |
|--------------------|---|
| La Carte | Que membranes by inhibiting the demethylation of lanosterol? |
| | appropriate less |
| *** | A. Tolnaftate |
| T. Bar | B. Griseofulvin |
| Cochene | (C) Itraconazole |
| 47.7 | D. Amphotericin B |
| | E. Natamycin |
| 1000 | |
| 11117 | 1. A polyene antifungal drug used as a mouthwash for the treatment of an oral |
| altitus, c | fungal infection (e.g., thrush): |
| | |
| | A. Naftifine |
| | B. Fluconazole |
| | C. Amantadine |
| - | Nystatin |
| | E. Flucytosine |
| | |
| 7. | 2. A protease inhibitor used in combination with two reverse transcriptase inhibitors |
| The Control of the | in the treatment of patients with HIV: |
| | |
| | A. Acyclovir |
| | B.) Nelfinavir — |
| | C. Amantadine |
| | D. Zanamivir |
| • | E. Foscarnet |
| • 1 v | |
| 73 | 3. All of the following are true about acyclovir EXCEPT: |
| | |
| | A. Is effective in the treatment of herpes simplex |
| | B. Is converted to its triphosphate metabolite, to inhibit viral DNA polymerase. |
| | _ C. Thas lower oral bloavailability than valacyclovit |
| | D. Intravenous administration may cause thrombophlebitis |
| | E. Causes a high incidence of seizures, hepatotoxicity and anemia False |
| | |
| 74 | Effects of thyroid hormones include all of the following EXCEPT: |
| | |
| | A. Essential for growth and development |
| | B. Increase basal metabolic rate 7 |
| | C. Essential for maturation of the central nervous system |
| | D. Increase plasma glucose 7 |
| | E. Increase plasma cholesterol False |
| | |
| | |

hypoglycemia & sedation

| 75. | Which of the following best describes the natural a |
|-----------------|---|
| 1 | Which of the following best describes the potential adverse reactions of levothyroxine? |
| 1177 | |
| | A Hypoglycemia and sedation |
| 1 | B. Insomnia and tachycardia |
| | C. Hepatotoxicity |
| | D. Nephrotoxicity and neuromuscular blockade |
| 3. | E. Mydriasis and constipation |
| | |
| , 76. | An endogenous hormone that lowers plasma calcium, inhibits bone resorption |
| TANK . | and is useful in the treatment of hypercalcemia of neoplasia: |
| | |
| Substanta. | Calcitonin - lowers plasma calcium |
| | B. Parathyroid hormone |
| TECTURAL STATES | C. Levothyroxine |
| | D. Insulin |
| | E. Progesterone |
| | |
| 77. | Which of the following best describes the adverse reaction profile of glyburide? |
| | 1. |
| | A. Renal impairment |
| | B. Congestive heart failure Nypoglycemia |
| | C. Pulmonary fibrosis . fatigue |
| | D Hypoglycemia and fatigue |
| | E. Bone marrow suppression |
| . 78. | All of the following are true about ethinyl estradiol EXCEPT: |
| | Call of the area about call y restraction ExCEP1: |
| . (| A Reduces high-density lipoproteins (HDLs) |
| ` | B. Increases coagulation factors II, VII, IX and X |
| | C. Increases the risk of migraine headaches |
| | D. Reduces bone resorption of calcium \mathcal{T} |
| | E. Combined with a progestin for oral contraception |
| | • |
| .79. | A partial estrogen receptor agonist used to stimulate follicular development and |
| | ovulation in certain cases of infertility: |
| | A Flytomide |
| | A. Flutamide |
| | B. Danazol C. Megestrol |
| | D. Mestranol |
| d | E.) Clomiphene |
| Ų | 2. Complete |
| | |

| 80. The antianginal actions of nitroglycerin include all of the following EXCEPT : | AND METERS |
|---|--|
| A. Coronary vasodilation — B. Relaxation of veins — C Bradycardia False D. Reduction in ventricular volume — E. Decreased afterload — | |
| 81. All of the following statements about fluoride treatment are true EXCEPT : | |
| A. There is a direct relationship between fluoride concentration in drinking water and protection against caries / B. Five parts per million fluoride concentration in drinking water gives more anticaries protection than one part per million / C. There is a direct relationship between fluoride concentration in drinking water and the occurrence of enamel fluorosis / D. The mechanism of fluoride action deals with the formation of more soluble fluorapatite from the less soluble hydroxyapatite, resulting in an increase in remineralization of the enamel folse E. There is a direct relationship between fluoride concentration in drinking water and the risk of development of hypocalcemia frue | |
| 82. Each of the following antiseptics/disinfectants is correctly paired with its characteristic EXCEPT: | |
| A. Sodium hypochlorite – release of chlorine; useful for debridement of root canals B. Iodine compounds – germicidal spectrum: bacteria, viruses, protozoa, fungi C. Iodophors – release iodine rapidly False D. Surface active agents – effective against gram positive organisms; include common soaps E. Oxidizing agents – might alter subgingival environment; problems with sloughing | 1 |
| 83. The drug of choice for the treatment of respiratory depression due to an overdose of morphine is | e de la companya de l |
| A. Pentazocine B. Methadone C. Buprenorphine D. Naloxone E. Propoxyphene | |

| | 84. | EXCEPT: |
|---------|------------|--|
| 8 | | |
| | (| A Normal cells are immune to the effects of cancer drugs False |
| | | B. Biochemical pathways needed for drug activity 7 |
| | 200 | C. Alteration of cellular molecules |
| | | D. Disruption of cell function – 7 |
| | | F. Effects on growing calls |
| | | E. Effects on growing cells |
| | 85. | Methotrovoto inhibito the activity of which arrange |
| ec * | 65. | Methotrexate inhibits the activity of which enzyme? |
| | ٠. | A. DNA ligase inhibits dihydrotolate reductase |
| | | 7. Divinguse |
| | | B Dihydrofolate reductase |
| | | C. Ribonucleotide reductase |
| | | D. Hypoxanthine-guanine phosphoribosyltransferase |
| | | E. Thymidine kinase |
| | | |
| | 86. | A 10-year-old girl is seen by the neurologist because she is having difficulties |
| | / | at school. During the day, the girl experiences brief losses of consciousness. |
| | | Her EEG reveals a 3Hz polyspike wave pattern characteristic of absence |
| | | epilepsy. After a course of treatment with carbamazepine, her symptoms |
| * | | worsen. The best medical management plan/is to |
| | | |
| | | A. Increase the dose of carbamazepine |
| | | B Supplement the carbamazepine with phenobarbital |
| | | C./ Switch to phenytoin and withdraw carbamazepine |
| | | D. Switch to ethosuximide and withdraw carbamazepine |
| | 1 | E. Determine the blood levels of carbamazepine |
| ~ | 12 | γ |
| 1 | (87. | An antihypertensive drug that is most likely to produce syncope with the first dose: |
| , | <u>ب</u> ر | |
| - 8 | | A Verapamil C6 |
| | (| B. Captopril ACE inh |
| | | C Hydrochlorothiazide >> |
| | . / | D. Praepsin RHT |
| | . C | $E. Methyldopa \longrightarrow No$ |
| | | |
| | 88. | Which of the following best describes the mechanism of action of insulin? |
| | | binds to 9 |
| | | A. Binds to a G-protein-linked receptor to increase adenylyl cyclase |
| | | A. Binds to a G-protein-linked receptor to increase adenylyl cyclase B. Binds to a tyrosine kinase-linked receptor C. Binds to an intracellular receptor to enhance gene expression Higher receptor |
| | | C. Binds to an intracellular receptor to enhance gene expression |
| | | D. Binds to a chloride ionophore |
| | | E. Binds to a G-protein-linked receptor to increase phospholipase C |
| | | |

Questions 90 and 91: For each of the numbered statements, select the single, most appropriate lettered family of drugs. You may use each letter once or not at all.

- A. A potassium sparer
- B. An osmotic diuretic
- C. A xanthine diuretic
- D. A loop diuretic
- E. A thiazide diuretic
- Therapy with this drug class may result in the development of hypokalemia, hyperglycemia, hyperuricemia, hypercalcemia and hypocalciuria; with prolonged therapy, increases in concentration of cholesterol and triglycerides may occur Thigzide diaretic

= E

Therapy with this drug class may result in the development of hypokalemia, hyperglycemia, hyperuricemia and ototoxicity

Questions 92 thru 95: For each of the numbered statements, select the single, most appropriate lettered agent. You may use each letter once or not at all.

- A. Azathioprine
- B. Cyclosporine inhibits IL-2 production.

 S. Rhogam newborns

 B. Thymosin Di George's Syndrome

 E. BCG

- E. BCG-TX Bladder Concer-
- Adjuvant used to stimulate the immune system and to treat bladder cancer BCG
- Substance used to reverse the effects of DiGeorge's syndrome Thymosia
- Substance that inhibits interleukin-2 production by T cells Cyclosporine
- Preparation used in preventing hemolytic disease of the newborn Rhogam

| Questions 96 thru 98: For each of the numbered statements, select the single, most |
|--|
| appropriate lettered agent. You may use each letter once or not at all. |
| Polymorein |
| Trimethoprim - inhibits dihydrotolate reductase |
| C. Sulfasalazine |
| E. Dapsone - anti-inflammatory |
| 96. Generally bacteriostatic when used alone; acts by inhibiting dihydrofolate reductas |
| 97. Prodrug used for its anti-inflammatory properties rather than its antibacterial |
| 98. Cell-wall synthesis inhibitor, may give flushing and redness following intravenous administration |
| Questions 99 and 100. Fine 1 and |
| Questions 99 and 100: For each of the numbered statements, select the single, most appropriate lettered agent. You may use each letter once or not at all. |
| A. Cefaclor = tapha acception |
| B. Sulfamethoxazole Clavulanic acid |
| E. Tetracycline |
| 99. Orally available, bactericidal antibiotic; acts by inhibiting cell-wall synthesis |
| 100. Bacteriostatic drug, may give red rash after exposure to suplicht (above in the same state) |
| do to opinion of teen |
| E Tetraeycline-may give red rash |
| |
| |
